

**HYBRID POWER SAVE DELIVERY METHOD IN A WIRELESS
LOCAL AREA NETWORK FOR REAL TIME COMMUNICATION**

Abstract Of The Disclosure

5 A mobile station establishes a schedule by which data is exchanged with
an access point. The schedule allows the mobile station to use a low power mode
at times outside of the scheduled service periods. However, the mobile station
may occasionally need to retrieve additional data from the access point, or
transmit additional data to the access point, and so initiates an unscheduled
10 service period to do so.
